

Agricultural Material Picking Machine

The SB Series Picking Up Machine is a robust agricultural implement designed for picking up and processing materials. It features adjustable settings for customizing picking height and material processing intensity, making it suitable for diverse crop types and field conditions.

Product Overview

Professional Material Handling Solution

The SB Series Picking Up Machine is a heavy-duty agricultural implement designed for the efficient collection and processing of diverse materials. Equipped with a high-performance rotor and specialized tines, it effectively lifts debris or crops from field surfaces. A built-in screening system ensures superior output quality by separating unwanted elements, making it an essential tool for agricultural, landscaping, and construction tasks.

Technical Specifications

Adjustable Features

- Picking Height
- Material Processing Intensity

Equipment Type	Agricultural Picking Machine
Rotor Components	Specialized Tines, Flails

Application Suitability

Industry Use Cases

Agriculture • Landscaping • Construction
