

Agricultural Spraying and Spreading Equipment

Equipment used for dispensing liquid or granular materials across fields. They ensure even distribution for optimal crop treatment.

System Overview

Integrated Broadcasting and Operation System

This comprehensive integrated solution is designed for high-performance broadcast management and service operations. The platform encompasses a sophisticated Business Operation Support System (BOSS) for efficient user management, billing, and statistical analysis. It features a robust network management suite to ensure seamless configuration and performance monitoring, while integrating diverse value-added services and digital TV platform management.

Core Modules

Architecture Components

- Business Operation Support System (BOSS)
- Integrated Network Management System (CPNM509)
- Value-added Service Access Platform
- Digital TV Encoding and Multiplexing Platform
- VOD and Media Asset Management

Network Infrastructure

Network Standards EPON+EOC, Broadcast HFC, CUTS+CM

Operational Capabilities

Operational Functions

Management Area	Functionality
Billing	Authentication, Authorization, Settlement
Network	Configuration, Performance, Fault Management
Value-Added	Content, Advertising, Payment, SMS Gateway
