

Agricultural Spraying Machinery

Agricultural spraying machinery is used to apply liquids, such as pesticides, herbicides, and fertilizers, to crops. These machines ensure even distribution, optimizing crop treatment and yield.

Product Overview

Professional Agricultural Spraying Components

These high-quality metal rings are engineered for precision in agricultural spraying and spreading machinery. Designed with an open-gap configuration, these components offer the necessary flexibility for seamless integration into complex industrial dispersal systems. Their durable, polished metal construction ensures reliable performance under demanding field conditions, making them essential replacement or assembly parts for agricultural equipment.

Technical Specifications

Design Features

- Open-gap ring geometry
- High-reflectivity surface
- Flexible attachment interface

Material Finish	Polished Metal, Corrosion Resistant, Industrial Grade
Unit Quantity	3
