

Agricultural Water Pump

This water pump is designed for efficient drainage and irrigation in agricultural applications. It is optimized for delivering a consistent flow rate and pressure, ensuring effective water management for various agricultural needs.

Product Overview

High-Efficiency Agricultural Water Pump

The G101 agricultural water pump is engineered for superior performance in demanding field environments. Designed for irrigation and drainage, it features a durable impeller and precision-machined housing to ensure reliable water management. This system provides consistent flow rates and pressure, making it an essential tool for various agricultural water transfer requirements.

Technical Specifications

Design Features

- Durable impeller
- Precision-machined housing
- High-quality bearing system

Performance Benefits

Reliable performance • Consistent flow rate • Robust construction

Primary Applications

Irrigation, Drainage, Water Transfer
