

Agricultural Water Pump for Irrigation

High-performance water pump designed for agricultural drainage and irrigation systems. Constructed from durable cast aluminum alloy for corrosion resistance and long-lasting operation.

Overview

High-Performance Irrigation Solution

This water pump is specifically engineered to meet the demanding requirements of agricultural irrigation and drainage systems. Built from high-durability cast aluminum alloy, the unit offers exceptional corrosion resistance and long-lasting performance in challenging field environments. Its precision-engineered impeller and housing design ensure optimal water flow and consistent operational efficiency for various agricultural water transfer needs.

Technical Specifications

Housing Material	Cast aluminum alloy
Applications	Agricultural Irrigation, Field Drainage, Water Transfer

Key Features

Key Advantages

- Corrosion-resistant alloy construction
- Precision-engineered impeller design
- Consistent high-flow output
- Suitable for demanding environments
