

Agricultural Water Pump for Irrigation

This water pump is designed for drainage and irrigation applications in agriculture. It features a robust construction with a pulley system for power transmission and easy connection to hoses or pipes.

Product Overview

High-Efficiency Irrigation Pump

This agricultural water pump is engineered to provide reliable performance in demanding drainage and irrigation applications. Featuring a robust, durable construction, it ensures consistent water transfer for agricultural operations. The integrated pulley system allows for efficient power transmission, making it a dependable solution for various farm water management needs.

Technical Specifications

Construction

Robust Design • Heavy Duty

Primary Applications

Agricultural Irrigation, Drainage

Power Transmission

Pulley-driven system

Connection Type

Inlet and outlet ports with standardized fittings
