

Agricultural Water Submersible Pump

High-performance water submersible pumps are designed for efficient drainage and irrigation. Featuring a robust impeller design and a powerful motor, they deliver exceptional flow rates and head pressure.

Product Overview

High-Performance Irrigation Solution

This submersible water pump is engineered for demanding agricultural environments, providing reliable operation for irrigation, dewatering, and water transfer. Designed with a robust impeller and a powerful motor, it ensures high flow rates and consistent head pressure. The submersible configuration allows for quiet operation while eliminating the need for priming, offering a seamless user experience in various field applications.

Technical Specifications

Key Operational Benefits

- Quiet operation
- No priming required
- Durable construction
- High flow rate capability

Pump Type	Submersible
Primary Applications	Irrigation, Dewatering, Water Transfer
