Product Overview

Efficient Agricultural Wood Processing

This agricultural wood chipper is designed for efficient wood processing in farming and forestry applications. It features a robust high-speed chipping rotor and a hydraulically driven infeed system for controlled material feeding, enhancing both safety and productivity. The machine is compatible with various tractor models via a standard three-point hitch, making it an ideal solution for managing wood waste and creating mulch on farms.

Performance & Features

Chipper Capacity

15 cm

Max Capacity

Certifications

CE Approved

Feeding System

Hydraulic
