

Air Bearing Casters and Kits for Heavy Load Movement

Air moving skates are suitable for smooth floors inside or outside doors, but not suitable for bumpy and porous floors. The kits include air bearings, a control unit, and hoses for connection.

Product Overview

Heavy Load Mobility Solution

These air bearing caster kits are engineered for the frictionless movement of heavy machinery and industrial equipment. By utilizing compressed air technology, the system allows for precise, omnidirectional positioning of massive loads with minimal force. Each kit provides a complete setup, including air modules, control consoles, and necessary pneumatic connections for immediate deployment.

Kit Components

Included Components

- 6 x Air modules with air bags
- 1 x Air control console
- Main air tubes
- 6 x Vice air tubes

Packaging

Packaged in one or two cartons

System Features

Key Features

Frictionless Movement, Heavy Load Capacity, Industrial Grade, Precision Control
