

# Air Bearing Movers for Heavy Load Transport

Air bearing movers efficiently transport heavy loads using a thin film of air. This system allows for near-frictionless and omnidirectional movement, making it suitable for maneuvering heavy equipment in various industrial environments.

## ADDITIONAL IMAGES

## Product Overview

### Advanced Air Film Transport

Air bearing movers utilize advanced air film technology to float heavy loads, creating a near-frictionless surface for precise and easy movement. These systems are ideal for maneuvering heavy machinery and equipment in manufacturing, warehousing, and logistics environments. By minimizing floor contact, the technology prevents damage and ensures a smooth, controlled transport process even in tight spaces.

## System Configuration

### Modular Configurations

- Four-module system
- Six-module system

## Logistics & Packaging

### Packaging Standard

Seaworthy • Airworthy

### Transport Compatibility

Air Freight, Express Delivery, Sea Freight, Land Transport

### Packaging Units

Packaged in one or two cartons
