

Air Bearing Transporters

Air bearing transporters are powered by air bearings. They are designed for moving heavy loads ranging from 10 tons to 48 tons.

Product Overview

Precision Air Bearing Transport System

This heavy-duty air bearing transporter provides a superior method for moving and handling cargo of any weight or shape. By utilizing air rigging technology, the system ensures vibration-free movement, making it ideal for relocating high-precision machinery. Its low-profile design allows for operation in tight spaces where traditional forklifts cannot access.

Technical Specifications

Load Capacity per Module

8 tons

Capacity

System Components

- 6 Air Tubes
- 6 Air Modules
- 1 Air Pressure Controller

Air Tube Length

6 meters

Features

Operational Advantages

Low Profile Design • High Precision Handling • Vibration-Free Movement • Versatile Load Positioning • Easy to Operate
