Air Caster Load Moving System

Air casters provide shock-proof load movement with no pollution. This system utilizes air bearings to create a near-frictionless interface, allowing for the smooth and precise movement of heavy machinery and equipment.

Product Overview

Precision Air Caster Load Moving System

This advanced air caster system is designed for the efficient, frictionless transport of heavy machinery and equipment. Utilizing air bearing technology, it provides a shock-proof and pollution-free solution suitable for environments with strict cleanliness requirements. The modular design allows for flexible configuration based on the specific weight and volume of the load, making it ideal for varying load sizes and weight distributions.

Technical Specifications

Available Capacities

- 10T
- 16T
- 20T
- 32T
- 48T
- 60T

Key Features	Shock-proof, No-pollution, Lightweight, Modular, Frictionless

Operational Details

Primary Applications	Moving heavy machinery and equipment with varying length, width, and weight distribution.
Installation	Yes
