

Air Classifier for Powder Removal

This equipment efficiently processes powder in sand aggregates, targeting extra powder and mud. It separates fine particles in finished sand aggregates using air classification for high efficiency and low cost.

Overview

Efficient Powder and Mud Removal

This industrial-grade air classifier is designed for the effective removal of powder and mud from raw materials. It utilizes an innovative inner circulation system, eliminating the need for externally installed fans. The unit features built-in adjustable classification points, allowing it to adapt seamlessly to different material types and varying moisture contents.

Design & Maintenance

Operational Features

- Inner air circulation system (no external fans required)
- Multiple adjustable classification points
- High wear-resistant construction
- Modular design for easy maintenance

Durability & Efficiency

Wear-resistant, Low maintenance cost, Adjustable, Industrial-grade
