

# Air Compressor for Pneumatic Applications

These air compressors come in direct drive and belt drive models. They are designed with special attention to quality and incorporate technology.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Air Compressors

These professional-grade air compressors are engineered for a wide range of pneumatic applications, offering versatile solutions for both industrial and workshop environments. With a comprehensive capacity range from 2L to 500L, these units provide reliable compressed air for various tools and heavy-duty equipment. Designed for durability and portability, the lineup features robust tanks and motor configurations to meet diverse operational needs.

## Technical Specifications

### Capacity Range

**2 L**

Minimum Capacity

**500 L**

Maximum Capacity

### Power Configurations

- Electric motor models
- Gasoline engine variants

## Design & Build

### Application Suitability

Industrial Use • Professional Workshop • Pneumatic Tools

### Design Features

Horizontal Tank, Portable, Wheeled, Protective Motor Cage
