

Air Compressor Microcomputer Control System

This microcomputer control system is designed for use with air compressors. It features a digital display, indicator lights, and buttons for setting parameters and resetting the system.

Overview

Advanced Microcomputer Control System

This microcomputer control system is engineered specifically for the precise management and monitoring of air compressor units. Featuring an intuitive digital interface, it allows operators to track critical performance metrics such as pressure, temperature, and system runtime. The integrated control panel simplifies operation with dedicated navigation buttons and clear status indicators for loading and unloading cycles.

Technical Specifications

Model Number	EAS-100-500
Control Functions	Pressure Monitoring, Temperature Monitoring, Runtime Tracking, Loading/Unloading Control

Interface & Usability

Interface Features

- Digital display
- On/Off status indicators
- Loading/Unloading status indicators
- Navigation buttons (Up, Down, Right, Set)
- Reset functionality

System Visualization	Yes
