

Air Compressor Sprayer Spreader

This spraying machinery and spreading equipment features a compact design with a vertically mounted air receiver tank. It is designed for applications requiring compressed air for spraying or spreading materials, offering portability and ease of use.

Product Overview

Professional Air Compressor and Spreader

This versatile spraying and spreading equipment is designed for high-performance industrial applications. It features a robust twin-cylinder compressor system integrated with an efficient air filter and regulator assembly. Engineered for portability, the compact vertical tank design ensures reliability for consistent material application and air-powered operations.

Technical Specifications

Control Features

- Pressure gauge
- Air filter assembly
- Regulator assembly

Compressor Configuration	Twin-cylinder
Lubrication	Integrated oil lubrication

Design and Utility

Key Features

Compact Design • Portable

Design Format	Vertical tank
Primary Applications	Material spraying, Material spreading, Compressed air applications
