

Air Compressor Unit for Spraying and Spreading

This compact air compressor unit is designed for spraying machinery and spreading equipment. It features a twin-cylinder pump and is mounted on vibration-dampening feet.

Product Overview

Professional Air Compressor Unit

This compact, twin-cylinder air compressor is engineered specifically for spraying and spreading machinery applications. It provides a reliable source of compressed air, featuring an integrated pressure regulator, a precision gauge, and an effective moisture trap. Designed for durability and stability, the unit is mounted on vibration-dampening feet to ensure consistent performance in demanding work environments.

Technical Specifications

Included Components

- Pressure regulator
- Pressure gauge
- Moisture trap
- Pressure tank
- Vibration-dampening feet

Design Features

Compact • Vibration-dampening • Moisture management

Pump Configuration

Twin-cylinder

Applications

Best For

Spraying machinery, Spreading equipment, General pneumatic applications
