

Air Conditioner Evaporator and Condenser Coil

High-efficiency evaporator and condenser coil designed for air conditioning systems. Constructed with copper tubing and aluminum fins for optimal heat transfer.

Product Overview

High-Efficiency Heat Exchange Solution

This high-efficiency evaporator and condenser coil is engineered specifically for air conditioning systems. It utilizes a robust construction of copper tubing paired with aluminum fins to ensure optimal thermal conductivity and heat transfer performance. The multi-row design significantly increases the surface area, promoting superior efficiency for a wide range of HVAC applications.

Technical Specifications

Design Features

- Multi-row configuration
- Optimized for heat transfer
- Enhanced surface area

Application Compatibility

Air Conditioning Systems • HVAC Equipment

Materials

Copper Tubing, Aluminum Fins
