

Air Conditioner Evaporator Coil

The evaporator coil absorbs heat from the indoor air within an air conditioning system. Its cylindrical design and multiple fins maximize the surface area for efficient heat transfer.

Product Overview

High-Efficiency Evaporator Coil

This evaporator coil is a critical component designed for air conditioning systems, specifically engineered for optimal heat absorption from indoor air. Featuring a robust cylindrical design with multiple fins, it maximizes surface area to ensure efficient heat transfer and cooling performance. Constructed from durable, corrosion-resistant materials, this coil is built for long-lasting reliability in demanding HVAC environments.

Technical Details

Primary Function	Absorbs heat from indoor air via refrigerant evaporation
Design Features	Cylindrical Design, High-Surface Area Fins, Corrosion Resistant

Maintenance

Care Instructions

- Regular inspection
- Periodic cleaning
- Prevent buildup of dust and debris
