

Air Conditioner Evaporator Coil

This is a replacement evaporator coil for air conditioning units. The coil is constructed from durable materials designed for efficient heat exchange.

Product Overview

High-Efficiency Evaporator Coil

This replacement evaporator coil is engineered for optimal heat exchange within air conditioning units. Its cylindrical design features dense finning to maximize surface area, significantly enhancing cooling performance and system efficiency. Constructed from durable, heat-conductive materials, it is built to withstand standard operating pressures and temperatures, ensuring a long service life for your HVAC system.

Technical Specifications

Design Features

- Cylindrical geometry
- High-density fin arrangement
- Optimized for heat transfer

Component Type

Replacement Part • HVAC Component

Construction Material

Copper, Aluminum
