

Air Conditioner Heating Element

Heating element designed for use in air conditioners. It is designed to provide heat for heating cycles or defrosting purposes within the air conditioner unit.

Product Overview

High-Efficiency Heating Solution

This heating element is precision-engineered for integration into modern air conditioning systems to facilitate efficient heating cycles and reliable defrosting. Featuring a robust serpentine metal tube design, it ensures optimal heat distribution and durability within the unit. The component comes equipped with pre-installed electrical wiring and connectors, streamlining the installation process for professional maintenance and assembly.

Technical Specifications

Component Type

AC Spare Part • Heating Element

Design Configuration

Serpentine metal tube

Mounting

Integrated metal brackets

Primary Functions

Heating Cycle, Defrosting
