Product Overview

Professional Fluid Control Solution

This high-performance inlet valve is engineered for fluid flow control in major household appliances, including air conditioners, dishwashers, and washing machines. Designed for durability and operational efficiency, it serves as a critical component in demanding HVAC and home appliance systems. Its compact architecture allows for seamless integration, ensuring long-term reliability and system performance.

Technical Specifications

Design Characteristics

- Compact design for easy integration
- Durable construction
- Optimized for flow efficiency

Number of Outlets	1
Suitable Applications	Air Conditioner, Washing Machine, Dishwasher, Ventilation Equipment
