

Air Conditioning Component Injection Mold

Precision-engineered mold designed for air conditioning component manufacturing. Constructed from high-grade steel, it ensures durability and longevity in high-volume production environments.

Product Overview

Precision Injection Molding Solution

This precision-engineered mold is specifically designed for the manufacturing of air conditioning components. It features a robust, multi-part construction with intricate internal channels and a detailed cavity, ensuring the production of complex shapes with high accuracy. Built from high-grade steel, this mold offers the durability and longevity required for demanding, high-volume production environments.

Technical Specifications

Compatibility & Integration

- Standard injection molding machine compatibility
- Integrated cooling lines
- Precise alignment mechanisms
- Secure clamping mechanisms

Construction Material	High-grade steel
Thermal Management	Yes

Performance Metrics

Production Suitability

High-Volume Production • Precision Engineering • Complex Geometry
