

# Air Conditioning Copper Pipe Fitting

This red copper fitting is designed for air conditioning systems. It provides a secure, leak-free connection for copper pipes of different sizes, ensuring efficient refrigerant flow and system performance.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance HVAC Copper Fitting

This red copper fitting is engineered specifically for demanding air conditioning and refrigeration systems. Constructed from premium-grade copper, it ensures exceptional corrosion resistance, structural integrity, and long-term durability. Its smooth internal geometry is designed to minimize pressure drop, facilitating optimal refrigerant flow and superior system performance in both residential and commercial HVAC applications.

## Technical Specifications

### Material Composition

Red Copper

### Application Compatibility

HVAC, Residential Air Conditioning, Commercial Air Conditioning, Refrigeration

## Key Performance Metrics

### Operational Advantages

#### 1 High

Corrosion Resistance

#### 1 Grade

Leak-Free Reliability

## Features

### Design & Build

- Smooth internal surface for low pressure drop
- High-durability copper construction
- Engineered for secure piping connectivity
- Compatible with standard copper refrigerant tubing
