

Air Conditioning Motor with Metal Housing

This motor is designed for air conditioning units. It features a durable metal housing with a square mounting flange and a black composite material shaft.

Overview

Robust Air Conditioning Motor

This motor is specifically engineered for high-performance air conditioning units, featuring a durable metal housing for enhanced longevity. Its design includes a square mounting flange with pre-drilled holes, ensuring a straightforward and secure installation process. The motor's composite shaft is optimized for efficient power transmission, making it a reliable choice for demanding B2B HVAC applications.

Technical Design

| | |
|------------------------|--------------------------------------|
| Housing Material | Durable Metal |
| Mounting Configuration | Square flange with pre-drilled holes |
| Shaft Material | Black composite material |

Performance

Primary Application

Air Conditioning Units • HVAC Systems

Key Features

- Efficient power transmission
- Robust construction
- Easy installation design
- Long-term reliability
