

Air-Cooled Diesel Engine (18-22 HP)

This air-cooled diesel engine is suitable for power generation. It features a robust construction and efficient air-cooling system.

Product Overview

High-Performance Air-Cooled Diesel Engine

This versatile double-cylinder diesel engine offers robust power output ranging from 18 to 22 HP, making it an ideal choice for power generation, industrial machinery, and agricultural applications. Engineered for durability, it features a 42CrMo material crankshaft, identical in grade to those used in automotive applications to ensure structural integrity. With a compact design, efficient air-cooling, and a miniaturized fuel injection system, it provides high performance with low fuel consumption.

Technical Specifications

Starting System

Electric Starting

Rated Power Output	18 HP, 19 HP, 20 HP, 22 HP
Crankshaft Material	42CrMo High-Strength Steel

Performance Features

Key Performance Benefits

- Optimized fuel injection system for economy
- Compact and lightweight build
- Heavy-duty construction for demanding environments
- Easy and quick startup
