

Air-Cooled Industrial Chiller Unit

Air-cooled chiller units are designed for industrial refrigeration and ventilation applications. The units have a robust construction with protective enclosures, multiple cooling fans, and integrated heat exchangers for efficient and reliable performance.

Overview

Industrial Cooling Solutions

This air-cooled industrial chiller unit is specifically engineered to meet demanding refrigeration and ventilation requirements. Featuring a robust, protective enclosure, the system ensures consistent thermal regulation for various process cooling applications. Integrated high-efficiency fans and heat exchangers deliver reliable performance in challenging industrial environments.

Technical Specifications

Build Features

- Robust protective enclosure
- Multiple integrated cooling fans
- High-performance heat exchangers

Cooling Technology

Air-Cooled

Applications

Industrial Refrigeration, Process Cooling, Climate Control, Ventilation
