

Air-Cooled Industrial Chiller Unit

This air-cooled chiller unit is designed for industrial refrigeration and ventilation applications. It is a self-contained, skid-mounted system suitable for cooling water or other fluids in HVAC systems or industrial processes.

Product Overview

Industrial Air-Cooled Chiller

This industrial-grade air-cooled chiller unit is engineered for robust performance in refrigeration and ventilation applications. Designed as a self-contained, skid-mounted system, it ensures ease of installation and operational flexibility for various industrial processes. The unit features a high-efficiency multi-fan configuration for optimal heat rejection and a powerful compressor for consistent refrigerant circulation.

System Design

Cooling Technology

Air-Cooled • Refrigerant Circulation

Mounting Configuration

Skid-mounted

Technical Specifications

Suitable Applications

- HVAC Systems
- Industrial Cooling Processes
- Industrial Refrigeration
- Ventilation Systems

Key Components

Multi-fan system, Compressor, Robust metal frame
