

# Air Cooled Industrial Chiller

This air-cooled industrial chiller is engineered for dependable temperature regulation across diverse industrial sectors. It boasts a durable build with corrosion-resistant components, ensuring long-term reliability.

## Overview

### High-Efficiency Industrial Cooling

This air-cooled industrial chiller is designed to provide precise temperature control across a wide range of industrial applications, including plastic injection, chemical processing, and electronics manufacturing. By eliminating the need for cooling towers or complex water piping, the unit offers a compact, space-saving footprint that simplifies installation. Its robust design ensures consistent performance and improved production efficiency for modern industrial environments.

## Application & Usage

### Suitable Industries

Leather Processing, Plastic Injection, Surface Treatment, Medicine, Chemical, Hydraulic Systems, Laser Technology, Shoe-making, Electronics, Printing

## Technical Features

### Design Advantages

- Compact structure
- Simple operation
- Rational design
- High-quality construction
- Small land area footprint

### Maintenance

Easy Installation • Low Maintenance

### Installation Method

Air-cooled (No cooling tower required)
