

Air-Cooled Single-Cylinder Engine

This is an air-cooled, single-cylinder engine with an external oil cooler. It is equipped with a carburetor fuel system and a finned cylinder for heat dissipation.

Overview

High-Performance Air-Cooled Engine

This air-cooled, single-cylinder engine is engineered for reliable performance in small vehicle applications such as motorcycles. It features an integrated external oil cooler and a finned cylinder design to ensure optimal heat dissipation during operation. The robust crankcase construction and carburetor fuel system make it a dependable choice for demanding power requirements.

Technical Specifications

Cooling System	Air-cooled
Cylinder Configuration	Single-cylinder
Fuel System	Carburetor
Key Features	External Oil Cooler, Finned Cylinder, Silver-finished Crankcase
