

# Air Curtain for Refrigeration and Ventilation

Air curtain designed for refrigeration and ventilation applications. This unit creates an air barrier to prevent the exchange of air between different environments, improving energy efficiency and maintaining temperature control.

## Product Overview

### Air Curtain Efficiency

This advanced air curtain is engineered for professional refrigeration and ventilation applications. By creating a high-velocity air barrier, the unit effectively prevents air exchange between disparate environments, ensuring optimal temperature stability. This solution significantly enhances energy efficiency, making it an essential component for high-traffic commercial and industrial cooling facilities.

## Performance Metrics

Function

Refrigeration, Ventilation, Thermal Barrier

## Application

### Suitable Environments

- Commercial cooling areas
- Industrial cold storage
- Temperature-controlled entryways
