

Air Dryer Assembly for Commercial Vehicle Brakes

This heavy-duty air dryer assembly is designed for commercial vehicle braking systems. It removes moisture and contaminants from compressed air, preventing corrosion and ensuring optimal brake performance.

Product Overview

Heavy-Duty Air Dryer Assembly

This air dryer assembly is engineered specifically for commercial vehicle braking systems to ensure consistent and safe operation. By effectively removing moisture and contaminants from compressed air, it protects critical brake components from corrosion and premature failure. Built for demanding environments, this unit integrates essential connection ports and monitoring interfaces to maintain optimal air quality within the vehicle's pneumatic system.

Technical Specifications

Construction

Heavy-Duty Build • Corrosion Resistant

Application

Commercial Vehicle Braking Systems

Primary Function

Moisture Removal, Contaminant Filtration, Corrosion Prevention

Connectivity

Interface Ports

- Multiple Pneumatic Air Line Ports
- Electrical Control Connectors
- Monitoring Interface
