

Air Powered Heavy Load Moving System

Air casters utilize compressed air to create a thin, near-frictionless layer between the load and the floor. This system enables omnidirectional movement and precise positioning of heavy machinery and equipment.

Overview

Air Powered Heavy Load Moving System

This air-powered heavy load moving system utilizes compressed air to create a thin film between the load and the floor, facilitating near-frictionless movement. Designed for industrial and manufacturing environments, it allows for omnidirectional movement and precise positioning of heavy machinery and equipment. The system includes essential components such as air bearings, control units, and connection hoses for reliable operation.

Technical Specifications

Available Load Capacities

- 10.0T
- 16.0T
- 20.0T
- 32.0T
- 48.0T

Origin
