

Air Quality Stone Filter

This stone filter is designed for air quality appliances. It provides a textured surface for filtration and structural support within humidifier and dehumidifier systems.

Product Overview

Air Quality Stone Filter

This specialized stone filter is engineered for integration into humidifier and dehumidifier systems. Its unique textured surface is designed to optimize air quality and moisture regulation within professional-grade units. This component serves as both a functional filtration medium and a durable structural element for climate control equipment.

Technical Specifications

Surface Texture

Textured • Porous

Primary Applications

- Humidifier filtration
- Dehumidifier moisture regulation
- Climate control structural components

Material Composition

Engineered Stone/Ceramic Composite
