

Air-Source Heat Pump for Climate Control

This air-sourced heat pump is designed for efficient heating and cooling. It features a robust construction with protective grilles covering the fan units and includes multiple pressure gauges for monitoring performance.

Overview

High-Efficiency Climate Control Solution

This air-sourced heat pump is engineered for reliable and efficient climate control, suitable for both heating and cooling applications. Designed for outdoor installation, the system features a robust, durable construction built to withstand environmental conditions. It incorporates advanced monitoring capabilities, including integrated pressure gauges, to ensure optimal performance and operational longevity.

Technical Specifications

Monitoring System

- Integrated pressure gauges
- Fan unit protective grilles

System Metrics

1 Ready

Outdoor Installation

Application	Heating, Cooling, Climate Control
Installation Type	Outdoor
