

# Air Source Heat Pump for Hot Water and Space Heating

This air source heat pump is designed for efficient hot water and space heating. It extracts heat from the ambient air, even at low temperatures, and transfers it to heat water or provide space heating.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Heating Solution

This advanced air source heat pump is engineered to provide both domestic hot water and space heating for residential and commercial applications. By extracting heat from ambient air even in low-temperature conditions, the system offers a sustainable and cost-effective alternative to traditional heating methods. It integrates robust compressor technology and an intelligent control system to ensure optimized performance across various setups, including radiators and underfloor heating.

## Technical Specifications

### System Features

- Advanced compressor technology for energy efficiency
- Intelligent control system
- Weather-resistant casing
- Environmentally friendly refrigerant
- Robust fan for optimal air circulation

### Suitable Applications

Domestic Hot Water, Space Heating, Radiators, Underfloor Heating, Residential, Commercial

## Performance

### Performance Highlights

**1 Capable**

Low-Temp Operation

**100 %**

Efficiency
