

Air Ventilation Fan

This fan is designed for air ventilation purposes in residential or commercial spaces. It incorporates different blade designs and a central fan unit for effective air circulation.

Product Overview

Air Ventilation Fan Components

This collection of ventilation fan components is designed for versatile air conditioning and industrial ventilation applications. The set features various blade designs and central fan units, engineered to optimize airflow performance. These components are constructed from durable, high-quality materials suitable for demanding professional environments.

Technical Specifications

Available Components

- Central Fan Units
- Multi-blade Impellers
- Curved Airfoil Blades

Primary Applications

Air Conditioning • Industrial Ventilation • HVAC Systems

Material

Metallic, Composite
