

Airless Paint Sprayer

This airless paint sprayer is designed for a variety of coating applications. It features a robust pump mechanism and adjustable pressure control for consistent, even paint distribution.

Product Overview

Professional Performance

This airless paint sprayer features advanced microcomputer control and electronic voltage regulation for intelligent nozzle size recognition. Its design prioritizes atomization quality and durability through the use of nano-technological pistons and stainless steel pump components. The unit is engineered for high flow rates, ensuring efficiency and professional-grade results for various coating applications.

Technical Features

Control System	Microcomputer control with electronic voltage regulation
Construction Materials	Nano-technological piston, Stainless steel pump body
Nozzle Technology	Yes

Design Details

Convenience Features

- Illuminated power switch
- Environmentally friendly plastic cup
- High flow rate capability
