

Airport Luggage Wrapping Machine with Rotating Platform

This machine wraps luggage and packages at airports and transportation hubs. It features a rotating platform and film dispenser for automated stretch film application.

Product Overview

Professional Airport Luggage Wrapping Solution

This automated luggage wrapping machine is engineered for high-traffic environments such as airports, train stations, and transport hubs. By utilizing a rotating platform and an integrated film dispenser, it provides a consistent, secure, and tamper-evident layer of stretch film around luggage and packages. Designed for ease of use, this equipment enhances luggage protection during transit and provides peace of mind to travelers.

Key Features
