

Alkaline Battery Component Set

This component set is designed for assembling alkaline batteries. It includes casings, insulators, contact plates, and conductive pins in common sizes such as AA, AAA, C, and D.

Product Overview

High-Quality Alkaline Battery Component Set

This comprehensive component set provides all the essential elements required for the assembly of standard alkaline batteries. Designed for reliability and precision, the kit includes a variety of cylindrical casings, durable plastic insulators, and conductive metal contact plates. It serves as an ideal solution for manufacturers and assembly facilities looking to maintain consistent production standards across AA, AAA, C, and D battery formats.

Technical Specifications

Included Components

- Cylindrical battery casings
- Plastic insulators
- Metal contact plates
- Conductive pins

Component Details

Component Category	Function
Cylindrical Casings	Structural housing for cell contents
Plastic Insulators	Internal separation and safety
Metal Contact Plates	Electrical connectivity
Conductive Pins	Terminal connection points

Supported Battery Sizes

AA, AAA, C, D
