

All-in-One Hot Water Heat Pump with Inverter

This smart domestic water heater uses full inverter technology for excellent energy saving and noise control. It is an ideal choice for sustainable domestic hot water needs.

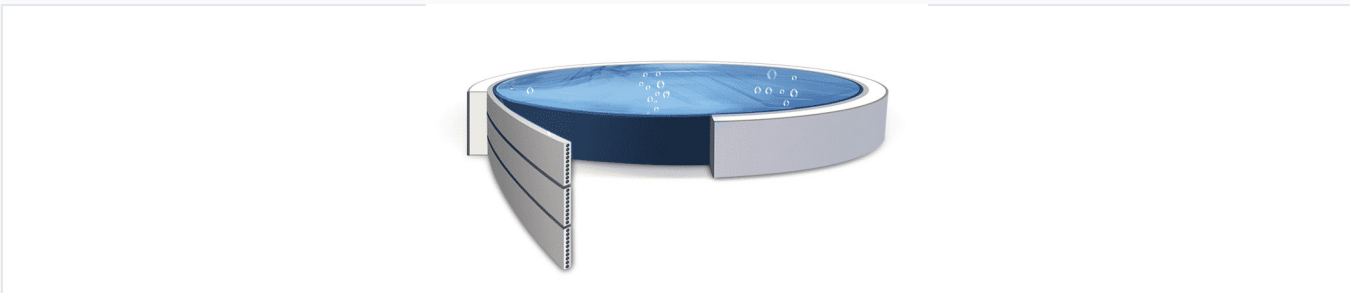

Overview

Smart Domestic Hot Water Solution

The airExpert-Inverter Series is an all-in-one domestic water heater utilizing Stepless Full Inverter Technology for superior energy savings and noise control. It features high-density micro-channel heat coils that maximize heat transfer efficiency between the refrigerant and the enamel water tank. This system is designed for a green lifestyle, offering professional buyers a sustainable and high-performance solution for residential hot water needs.

Core Technology

High-density micro-channel coils ensure a large-area heat exchange with the enamel tank for maximum efficiency.

Inverter Technology

Stepless Full Inverter • Energy Saving • Low Noise

Heat Exchange System

High-density micro-channel heat coils with multi-flow

Control System

The intuitive color touch screen allows for precise temperature control and real-time monitoring of the heat pump's performance.

Smart Monitoring Features

- Real-time water temperature setting
- Running mode selection
- Temperature curve tracking
- Unit working condition monitoring

Standard Target Temperature

55 °C

Target Temp

User Interface

Color touch screen controller

Construction

Water Tank Type

Enamel water tank
