

# All-Steel Radial Truck Tire

This all-steel radial tire is designed for short to medium distance travel on various road surfaces. It is optimized for overloaded transport applications and features a wider tread crown with a deep pattern for enhanced grip and durability.

## Overview

### XR818 All-Steel Radial Tire

The XR818 is a specialized all-steel radial tire engineered for short to medium-distance transport applications. Optimized for vehicles operating on diverse road surfaces, it excels in high-load scenarios covering distances of less than 600km. The design focuses on extreme durability, heat resistance, and superior puncture protection for demanding commercial use.

## Performance Features

### Core Benefits

- Super hard-wearing compound tread for extended service life
- Low calorificity rubber material minimizes heat generation
- 0° breaker structure provides high puncture and tear resistance
- High-strength steel carcass and bead structure for heavy load endurance

## Design Specifications

### Tread Characteristics

Wider Tread Crown, Deep Pattern Design

## Operational Metrics

### Operational Limits

**600 km**

Maximum Recommended Distance

## Compatibility

### Vehicle Application

Short-Medium Distance • Overloading Application • All-Wheel Position
