

All-Terrain Tracked Personnel Carrier

This all-terrain tracked personnel carrier is a specialized vehicle designed for transport across challenging environments such as snow, ice, and uneven terrain. It utilizes a tracked propulsion system to provide superior traction and stability.

Overview

Designed for Extreme Environments

This all-terrain tracked personnel carrier is engineered for high-stakes operations in the world's most challenging environments, including snow, ice, and uneven terrain. It serves as a heavy-duty solution for polar scientific research and emergency rescue missions. Featuring a specialized articulated design, it ensures reliable personnel and material transfer where conventional vehicles cannot operate.

Capacity & Performance

Seating Configuration

4 persons

Front Module

8 persons

Rear Module

Total Rated Capacity

12 persons

Applications

Primary Applications

Polar Scientific Research, Emergency Rescue, Personnel Transfer, Material Logistics

Design Features

Vehicle Type

All-Terrain • Tracked Propulsion • Articulated
