

All-Terrain Tracked Rescue Vehicle

This all-terrain crawler vehicle is designed for rescue and engineering operations in challenging environments. Equipped with a robust track system, it provides exceptional traction and stability on various surfaces, including snow, mud, and uneven terrain.

Overview

All-Terrain Rescue Capability

This all-terrain tracked vehicle is engineered specifically for high-stakes emergency response and engineering operations. Designed for reliability during the critical first 24 hours of an incident, it provides the mobility and specialized equipment necessary for rapid life detection and rescue in challenging environments. Its robust crawler system ensures stability and traction across snow, mud, and uneven terrain.

Equipment & Features

Integrated Rescue Tools

- Life detectors
- Power generators
- Rock drill

Operational Context

Optimal Response Window

24 hours

Golden Hour Response

Primary Applications

Search and Rescue, Emergency Response, Engineering Operations, Resource Exploration
