

All-Terrain Tracked Vehicle for Petroleum Exploration

This all-terrain tracked vehicle is designed for petroleum exploration and support. It features articulated design, heavy-duty tracks, and an enclosed cab for operator safety and comfort.

Overview

Rugged Exploration Capability

This all-terrain tracked vehicle is engineered specifically for the rigorous demands of petroleum exploration and remote site support. Featuring an advanced articulated design, it offers exceptional maneuverability across challenging landscapes, while heavy-duty tracks ensure superior traction in mud, snow, or uneven terrain. The enclosed cabin prioritizes operator comfort and safety, making it an ideal solution for seismic surveys, equipment transport, and essential site maintenance in the most isolated locations.

Operational Capabilities

Key Features

- Articulated design for enhanced maneuverability
- Heavy-duty tracks for superior traction
- Enclosed cab for operator comfort
- Safety-focused operator environment

Performance Highlights

1 All-Terrain
Terrain Compatibility

Primary Applications

Seismic Surveys, Equipment Transport, Site Maintenance, Petroleum Exploration
