Overview

High-Efficiency Nut Strip Cutting Solution

This advanced cutting machine is designed for processing peanuts, almonds, and cashew nuts into uniform strips or bar shapes. Developed using modern technology, it handles half-cooked nuts with high precision, ensuring minimal waste and consistent output. It is an ideal solution for large-scale food processing facilities looking to enhance efficiency and reduce labor costs.

Performance

Key Features

- Uniform cutting for consistent strip shapes
- Low waste rate during processing
- Easy operation and maintenance
- Suitable for half-cooked nut processing
- High-speed production capability

Technical Design

Construction Material

Stainless Steel

Machine Components

- Robust motor for consistent performance
- Feeding hopper for continuous input
- Adjustable cutting blades
- Integrated control panel

Application

Compatible Nut Types	Almonds, Peanuts, Cashew Nuts
End-Use Applications	Baking, Confectionery, Food Processing

Operation

Adjustable Settings	Thickness control for almond strips via adjustable blades
