

Alternator Brush Series with Copper Windings

This alternator brush series provides a cost-effective and quality power generation solution. It features 100% copper windings and is equipped with monitoring and protection devices like a volt-meter, AVR, and circuit breaker.

Product Overview

Reliable Power Generation Solution

The Alternator Brush Series is engineered for consistent performance, featuring 100% copper windings to ensure longevity and efficiency. This unit is designed with safety and stability in mind, incorporating essential monitoring tools such as an integrated Volt-Meter and an Automatic Voltage Regulator (AVR). Built to rigorous standards, this solution offers a balance of cost-effectiveness and high-quality construction suitable for diverse power generation needs.

Technical Features

Safety & Monitoring Devices

- Volt-Meter
- Automatic Voltage Regulator (AVR)
- Circuit Breaker

Winding Material

100% Copper

Compliance & Certification

Quality Standards

Quality Assured • Service Guaranteed • Cost Controlled

Certifications

ISO9001, CE, EPA
