

Alternator for Power Generation

This alternator is designed for power generation. The unit features a durable enclosure with ventilation grilles and is mounted on a sturdy base.

Product Overview

High-Performance Power Generation

This robust alternator is specifically engineered for reliable power generation across various electric power systems. Featuring a durable enclosure with integrated ventilation grilles, the unit ensures efficient cooling during continuous operation. Its sturdy base mounting provides the stability required for demanding transmission and distribution applications.

Design & Construction

Cooling System

Passive Air Cooling • Ventilation Grilles

Enclosure Design

Durable enclosure with ventilation grilles

Mounting

Sturdy base mount

Application

Primary Application

- Power Generation
- Electric Power Transmission
- Power Distribution Systems

Stability Features

Stable Operation, Industrial Grade, Heavy Duty
