

Aluminium Industrial Tray

Durable and lightweight, this aluminium tray is suitable for various industrial and engineering applications. It is constructed from high-grade aluminium, offering excellent corrosion resistance and structural integrity.

Product Overview

Industrial Aluminium Tray

This durable and lightweight aluminium tray is engineered for a wide range of industrial and engineering applications. Constructed from high-grade aluminium, it provides superior corrosion resistance and structural integrity for demanding environments. It serves as an ideal, reliable, and versatile solution for foreign engineering contracting and complex engineering projects.

Material & Construction

Material	High-grade Aluminium
Key Features	Corrosion Resistant, Lightweight, Durable, High Structural Integrity

Applications

Primary Applications

- Foreign Engineering Contracting
- General Engineering Projects
- Industrial Handling
- Component Storage
