

Aluminum Air Tank for Spraying Machinery

This aluminum air tank is designed for spraying machinery and spreading equipment. Constructed from durable aluminum, it provides a lightweight yet robust solution for storing compressed air.

Product Overview

Professional Grade Aluminum Air Tank

This aluminum air tank is engineered specifically for spraying machinery and industrial spreading equipment. Constructed from high-quality, durable aluminum, it offers a lightweight yet robust solution for reliable compressed air storage. Its design ensures efficiency in various general machinery and compressor applications, providing a stable performance for demanding industrial environments.

Technical Specifications

Key Features

- Lightweight aluminum construction
- Durable, corrosion-resistant design
- Includes integrated air delivery hose
- Optimized for pressurized air storage

Material	Aluminum
Primary Applications	Spraying Machinery, Spreading Equipment, Compressors, General Machinery
